

Unlocking opportunities for a better tomorrow

As a leading delivery partner in complex infrastructure, we create reliable, safe and sustainable solutions that unlock opportunities for our people and customers.

DT Infrastructure (DTI) is a fresh name in Australia's construction industry. We combine the innovative and agile approach of a new business, with our proven track record delivering major infrastructure projects nationwide.

DTI delivers specialist construction and engineering solutions that support Australia's infrastructure future.

What we do

DTI delivers end-to-end infrastructure solutions across Australia.

Rail

Heavy and light rail, stations, systems and signalling, depots and maintenance facilities, and rail asset maintenance works.

Energy and Renewables

Solar and wind farms, battery energy storage systems, substations and transmission projects.

Roads and Bridges

Major highways, bridges, earthworks and civil construction.

Defence

Base upgrades, runways, training facilities and resilient infrastructure.

Global backing, local expertise

As part of the Gamuda group of companies, DTI offers a unique synergy of local expertise in complex infrastructure projects and the backing of global infrastructure and property multi-national, Gamuda.

Complex infrastructure delivered sustainably

We are involved in some of Australia's largest and most complex infrastructure projects, delivering future-proof solutions that address the evolving needs of communities.

To DTI, sustainability means delivering financial growth and value for our clients, looking after the health and safety of our people, having a diverse and inclusive workforce, and minimising our impact on the environment.

In-house engineering

Our approach to engineering is structured around key principles that encompass design, project management, assurance, innovation, and risk management. These principles enable us to execute projects with reliability, precision and adaptability and are the backbone of how we work. We strive for continuous improvement across our engineering functions, learning from each project to refine our processes and ensure that our clients benefit from the latest insights, best practice and innovations.

Social Impact

The work we do changes how Australians live their lives and we are dedicated to leaving a positive impact on the communities where we operate, the people we partner with and our clients.

We deliver projects responsibly, ethically, and sustainably, with respect for local cultural heritage and a focus on minimising environmental impacts.

Through engineering innovation, collaborative contracting and leading sustainability practices we're unlocking opportunities for a better tomorrow.
